Company Description:

Founded in 1987, Double First has been at the forefront of computer software development for Independent schools.

Over the years, Double First has created a suite of programs covering all aspects of an effective Management Information System (MIS). Double First's success has its roots in continuous development. From original DOS beginnings in the 1980s, Double First programs now embrace Microsoft's .NET technology. Staying abreast of technology enables reliable, easy to use software.

In an increasingly sophisticated and sometimes complex business world, Double First clings to its original principles - intuitive operation, innovation, and creativity to meet the ever changing needs of schools.
