

Dr Johannes Recht
Director of Physics for the 3B Group
UK 3B Scientific Ltd

Having gained his PhD in Nuclear Physics in 1984, at The University of Bonn, Dr Recht took up a research post at The Hahn Meitner Institute in Berlin, before joining an International Educational Equipment supply company in Germany, in 1986 - initially as Team Leader in the Development Department. Some five years later he took on responsibility as Head of Product Management and Marketing; then another five years on, joined the Board as Vice President/Head of Science Division, with responsibilities for both Domestic and International Sales.

In June 2000, Dr Recht was appointed as Director of Physics at 3B Scientific and in the ensuing years has set up and developed its Physics Division, to complement their long-established and internationally renowned ranges of products for the teaching of Anatomy, Biology and Health Education. Early in 2005 he was instrumental in the acquisition of the Teltron[®] brand and the setting up of the 3B-Teltron Production facility in Park Royal, West London. This has led to a close cooperation with the Nuffield Curriculum Centre and also collaboration with the Institute of Physics, in presentation of practical Workshops throughout the UK.

There can be little doubt that our presenter brings not only the best of scientific credentials but also an enviable breadth and depth of experience within the Educational Supply Industry – acknowledged by his membership of the Advisory Board of Worlddidac Basel. Dr Recht will also be in attendance at the UK 3B Scientific Limited booth, where he will be happy to deal with any questions/enquiries that could not be dealt with during the Workshop.
